Shutters

Combining timeless design with modern functionality, Wanaka and Omaha shutters are crafted to enhance your home's interior and exterior spaces. These shutters blend traditional appeal with creative light control, making them ideal for any décor. Choose sustainably grown timber for natural warmth or durable synthetic materials for low-maintenance resilience, shutters offer versatility that suits any application.

Custom-made to fit each unique opening, Wanaka and Omaha Shutters can be installed as hinged, track bifold, or sliding panels, seamlessly integrating into any room of your home. Shutters also provide great benefits—offering privacy, insulation, and protection from the elements throughout the year. The rotating louvres give you precise control over light and your view, creating a comfortable and inviting atmosphere in any season.

As a permanent feature, shutters not only elevate the look of your space but also add lasting value to your home.

Wanaka timber shutters are beautifully crafted using sustainable, lightweight Paulownia wood sourced from certified plantations and kiln dried to best suit our environment. With a wide range of customisation available, our Wanaka shutters are among the most versatile in the market. Superior joinery stability makes this material ideal for large panels, like hinged doorways, increasing their longevity and reliability in a home environment. Mortise and tenon joinery and carefully detailed mouldings create a stunning finished product.

Omaha shutters are crafted from a synthetic material, making them perfect for wet areas such as bathrooms and laundries. Built to withstand New Zealand's climate, they're ideal in any weather, rain or shine. Reinforced with aluminium to add stability and reduce weight, Omaha shutters are a hardworking product as well as being an affordable solution for use throughout the home.

Add a modern classic touch to your interior styling, while enhancing the versatility of windows and doors with shade, privacy and air flow.
